Application 10/022,896

DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

Claims 1-13 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Vail et al ('329). See, inter alia, the abstract, figure 9, and columns 1-3, 6, 10 and 11. Note filter 110 in the pump resonant cavity, Raman gain medium 104, grating reflectors 106, and attenuating filter 110. This broadband source operates in the coherence collapse mode, and only some, or none, of the pump output are delivered to different pumping applications.

Please note that claim 12 is rejected solely to the extent that it is understood at this time

Please note that the specific reference constituents cited herein are done so for the convenience of the Applicant and are in no way intended to be limiting. The references should be considered in their entirety.

2. Claims 1, 3, 4, 7, 12 (as best understood at this time), and 16, are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Akasaka et al ('288). See, inter alia, the abstract, figures 10, 40 and 50, and columns 2, 4-6 (especially 5-6), 9, 13, 15, 16, and 18.

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 12 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 12 sets forth “a method of providing” and provides for the use of means for altering the amplifier gain profile, but, the claim does not set forth any steps involved in the method/process, and it is unclear what method/process applicant is intending to encompass. The claimed recitation of a method, without setting forth any steps involved in the process, results in an improper definition of a process, i.e., results in a claim which is not a proper process claim under 35 U.S.C. 101. See for example *Ex parte Dunki*, 153 USPQ 678 (Bd.App. 1967) and *Clinical Products, Ltd. v. Brenner*, 255 F. Supp. 131, 149 USPQ 475 (D.D.C. 1966).

4. Claim 12 is rejected under 35 U.S.C. 112, second paragraph as indefinite. This claim provides for “a method of providing” but, since the claim does not set forth any steps involved in the method/process, it is unclear what method/process applicant is intending to encompass. A claim is indefinite where it merely recites a use without any active, positive steps delimiting how this use is actually practiced.

5. The references cited by Applicant (PTO-1449) have been considered and found to be only generally representative of the state of this art.

References A, B, E-G, N and U-X (PTO-892) are cited to the widespread prior art knowledge of using a broadband emitter operating in the coherence collapse mode.

As Applicant was the co-author of references U and W, Applicant is requested to supply copies of the references with his reply hereto.

6. The abstract of the disclosure is objected to because it is not in a single paragraph.. Correction is required. See MPEP § 608.01(b).
